

THE NORTHVILLE RECORD

SAUER H. LITTLE, Editor.

SATURDAY MORNING, Sept. 30, 1871.

A Trip West.

Eisenhower's Detroit-D. & M. Railroad—General appearance of Country—The Railroad accessory to its growth—Officers and Management—St. John's, its improvements—Grand Rapids, appearance and general statistics of the city—Hospitality of a busy friend, formerly of our village—Return Home.

Monday evening, we arched ourselves of a few days leave for a visit to Grand Rapids and its Fair, which was to begin the following day. Took the 4 p.m. train from here, and landed in Detroit in time for tea at Eisenhower's. Here we staid over night and realized as we always do that the fatigues of a journey are considerably increased by a good meal and clean bed. Since making this a stopping place we have always found it worthy of commendation in every particular. What a guest generally seeks for is comfort, and this is what can be found here in plenty. Only those who are desirous for "style" at the rate of three or four dollars per day, could be other than satisfied with the house and its management throughout. To be sure it is situated a little back from the central portion of the city, but even that drawback will soon be obviated, as the street cars are to run by the house from three avenues, and the enterprising proprietors also seriously contemplate running a private "bus" to the trains. Thus it will be seen that the hotel will soon occupy its proper position with the public. As we took the D. & M. at 10 A.M. the following day Tuesday, the other partner Mr. Ogle, with his lady, were making ready for a trip that evening by boat to Cleveland, Ohio, to attend the State Fair there. As we afterwards learned they had a pleasant time till returning, when such was the state of Lake Erie's "angry" billow, that the boat nearly went down, and as it was did arrive in Detroit till 2 P.M. when she should not have landed at 7 A.M.

We now took the 10 A.M. train on the D. & M. Railroad and were quickly whirling away towards the west. It would be in vain, and perhaps useless at best, to attempt a description of the splendid country tributary to this road. Only those who personally see it can have any distinct idea of its true worth. Now and then we stop at a station, perhaps that of some large town bearing evidence of wealth and importance—the latter item quite natural with the inhabitants of the State generally—or it may be at the humble "stopping on place" of some enterprising little village that waits only time to make itself felt as a power in the land. It is a pity that some of our Eastern friends could not open their eyes on the beauties presented on every hand as we speed along, the varied scenes of lakes, rivers, valleys and hills; or view the well cultivated farms, where thrift and economy have walked hand in hand, and to know the comfort that must assuredly dwell within each cosy home. Perhaps then their usual theory, that "it is all woods in Michigan," would have lost much of its interest, and this truth becomes apparent, that even this western land has leaped far a head of most older countries in every particular. Of course these cities and villages springing up as it were in a moment's time, and those nicely cleared fields and improvements surrounding, have been essentially aided by railroad advantages. Perhaps no one in sea, world ever have existence, had the good old Detroit and Milwaukee paid in its appearance. This road, the oldest in the State, has been well managed since its foundation, and at the present time is under the supervision of energetic and efficient officers. Those acquainted with Tuggs, Bass, superintendent, can imagine what must be the success of the road. He is the very *dear* ideal of railroad managers. Ever alert to any improvements that can tend to the advancement of the road's interest, or good for the people on its route, and exhibiting more than common civility and respect, to those who may approach him either in a business sense, or otherwise.

We made but one stop, on the way and that at St. John's. Here we were sociably entertained by a brother type, Mr. S. Corbin and lady, to whom we extend our thanks. Mr. Corbin is editor, and one of the publishers of the *Independent*, the democratic organ of Clinton County, and a paper that must meet with good success judging from its large circulation. A call at the office of the other local paper, the *Advertiser*, satisfied us that the village had another good representative and the reporter a "friend in need." It is several years since we last visited this place, and we find that, in point of building, it has changed considerably. New dwellings, new stores, and a splendid new Court House—the latter in itself a model of architecture—are to be seen, while the activity and bustle about the streets tell ten a business not surpassed by any other town of its size in the State. We regret exceedingly we could not have made a visit to the interior of the Court House, of which the citizens reasonably feel proud, but time forbids, and 4 o'clock next morning found us started again for the west. Two hours after we arrived at our journey's end

GRAND RAPIDS.

Here our "better half" and self soon forced ourselves easily domesticated with our former citizen here, Mrs. Mary Moon, whose residence is located on one of the principal streets and compared favorably with the numerous fine dwellings in the city. During the day we all visited the Union Fair Grounds two miles from the city. Of this

ALWAYS AHEAD.

USEFUL AND SUGGESTIVE.

Persons for the simple and temperate life.

"How to Cure a Calf's Disease and Ease its Distress."—Take a small quantity of camphor, and lay it over the animal, and dare not let it go off or trace it; then burn it, but they will disappear.

Friction?—Worth 50¢ for a whole neighborhood.—See *Western Ranch*.

CANVAS FOR SKETCHING.—To prepare a canvas for sketching in oil, first strain it tightly upon a frame, then wash over with thin gesso. When dry, paint with a coat of oil color made of white lead, red lead, linseed oil, and turpentine, and afterwards with a second coat in which the red lead is omitted and sugar of lead with a little coloring matter substituted.

A CORRESPONDENT of the *Guardian* says that on the 15th of April he planted two rows of Egg-bean peas close together. The seed in one row had been kept during the winter in a warm room; that of the other in an empty stable perfectly dry, but exposed to severe cold. Previously to the end both seeds were in the same condition.

We should all have our flowers of time, bright spots in our life to-day, and if possible, brighter moments in expectation for the morrow. We must toll, and toll incessantly. That fact cannot be shirked, avoided, or passed by; it stands settling at every turn and speaks to us even in the land of dreams. But our soul is impetuous with many joys, sweet smiles, cheerful music, eventful episodes, fair flowers, and frolicking flocks, if we add these joyous trifles, and we can't see we will go racing, bounding, and we also for the pleasure for them, and also for the play of little times gone by and the anticipation of pleasant hours to come.

FEDDING NOTICES TO LADIES.—The Vienna Agricultural and Moral Journal states that hens fed in the winter with chopped and boiled nettle leaves, or with the seeds, and kept in a warm place, will continue to lay during the entire winter.

The *Wise Farmer* suggests by noting the exercises with which both domestic and wild birds devour the needle leaves and seeds wherever the opportunity is afforded. This proclivity is believed to be the reason why, with the enormous yield of seeds on the part of the nature, comparatively so few plants spring.

A CORRESPONDENT of the *Canada Farmer* says that there is no doubt in his mind that an edge taken from the tomato plant in autumn, just before frost, stuck in damp soil, and with a well-rooted root removed to six-inch pots, kept in an atmosphere of forty to sixty degrees, and watered just sufficiently to keep them alive during winter, is the true way of obtaining the earliest fruit. The shoots should be pinched back, and when the roots have reached the top of the pots, cut them off, and then transplant them in boxes, and set them out in the open air. If you can't afford a pump, procure a pine pole of sufficient size, and saw out a block of five inches within five inches of the end, and put on a spring with screws, so that a bracket may be put on, or taken off at pleasure.—*Western Ranch*.

To Judge the Quality of Honey.

This is an interesting question, and one, we believe, not very generally understood. Honey, of course, is judged mainly by its color, but owing to the fact that there is often a very great difference in the color of the comb, and the additional fact that bees often put white honey in dark combs, and vice versa, it is manifest that very great care must be exercised in taking up account both of the comb and the honey. The proper way to judge honey is to raise it into glass jars. You can then readily judge of its color. But if there are at least two other qualities to be considered—thickness and flavor. In judging of its thickness, it is necessary for the judge to know whether that quality was imparted in the first instance, or whether it is due to the action of light. Take a light (the electric lamp) and hold it over honey very much as it does upon the tide of silver, on the phonograph's excited vibration plate.

Take two bits of honey from the same comb, seal them up perfectly tight, and keep them both at the same temperature—only one in the sunlight and the other in a dark room—and the former will gradually grow thick and finally assume a semi-crystallized shape, while the other will retain its original fluidity. This is one reason why bees always work in the dark, and why honey should always be kept in the dark, or in opaque vessels.

It would be very improper to award a first prize to a jar of honey that had been exposed to the action of light, because it thereby becomes deteriorated.

Still honey, to be superior, should not be very thin. Flavor is also a very important consideration, and must always be required. A good-flavored, dark honey may sometimes be superior to a white article which looks much better. The thickness and fitness of honey depends upon the source from which it is gathered, rather than upon the secretative action of the bees, which we admit that the insect makes or simply gathers it.—*Scientific American*.

Converting U. S. Five-Twenty.

Messrs. Jay Cooke & Co., whose opinion regarding money matters is certainly entitled to great weight, have issued the following circular circular relative to the general conditions of the loan market, and the exchange of government bonds for railroad securities:

Office of Jay Cooke & Co., Philadelphia, September 18th, 1881.

The signal success of the New Five Per Cent Government Loan foreshadows the early funding of the entire public debt at a less rate than 6 per cent., and indicates that the average rate of interest on loanable capital in this country will henceforward be considerably lower than it has been, the tendency being to an equalization of rates between America and Europe.

In view of these facts, the present hold in United States Five-Twenty bonds decide whether it is not best to make out such a change of investment as will enable them to realize as profit, or add to their capital, the present average premium of 14 per cent on Five-Twenty, while at the same time largely increasing their annual income.

Holders of Five-Twenty of the issues of 1862 which, under the recent announcement of the Secretary of the Treasury, will be paid off in December next, have special and immediate reason to consider the question of conversion, unless they wish to receive coin for their Five-Twenty, or exchange them at par for bonds of the new issue, bearing an average rate of 4 per cent.

To all holders of United States securities who wish to take advantage of the present most favorable opportunity for changing their investment at a large profit, we strongly recommend Northern Pacific Seven-Twenty (principal and interest paid in gold), now selling at par in currency.

The results already accomplished in the construction and equipment of nearly Three Hundred Miles of road, and the rapid development of the adjacent country, have established the permanency and solidity of the Northern Pacific enterprise, and the fact that the salt in the lake has not been deposited there more than three hundred and fifty years, and that the changes in the lake from fresh to salt occurs at periods of five to ten centuries. It is also stated that alkali and salts of the basin will in time give place to another condition governed by the atmosphere, out of which triple furnance and great growth of timber are to come.

The aeronaut Wise has made 445 successful ascensions.

A Cheap and Substantial Cistern.

No one having had a cistern for even a short time will be willing to do without one. When it is known, too, what a small amount of money and labor is required to make one, the provided farmer will no longer permit the family to waste time and strength to insure cleanliness in the kitchen, from not having access to an abundant supply of pure soft water. By reason of having comparative leisure, and the ground being usually free from water, the fall of the year is the best time for the performance of this work.

In the construction of a cistern of ordinary size, commence to dig about four feet in diameter, and proceed in a perpendicular direction until firm ground is reached; then make a jog of about four inches toward the center, for the wall to rest upon.

A cistern eight feet in depth, and six inches at the widest point, made exactly in the shape of an egg with the large end down, is sufficient for a family of ordinary size. The shape is important for the strength of its walls. To procure the above shape, the use of a grubbing hoe, or other like tool, is quite necessary.

Break a hole in the bottom of the

bottom of the cistern for Northern Pacific, thereby increasing his principal by 14 percent, receiving \$1.40 in Northern Pacific for \$1.00 in Five Twenties. He also permanently increases his yearly interest income on his investment more than 38 per cent, or from \$600 in gold to \$872 in currency.

Funds invested in Five-Twenty find their present premium yield 5½ percent interest in gold, or 3½ in currency. Northern Pacific Seven-Twenty yields 7½ to 10 percent in gold, or \$1. in currency.

These most unusual opportunities for the profitable conversion of Government Bonds into Corporate Securities of undoubted reliability exist, in the nature of the case, long continuo. The interest is abundant, of loans repaid both at home and abroad; the almost certain rise in value of all desirable railroad mortgages, the rapid absorption of Northern Pacific Seven-Twenty and the probable early substitution of a six per cent bond for the remainder of the Northern Pacific loan, and the early funding of the remaining of the National Debt lower rates, promise very soon to change the entire aspect of the loan market, which is just now so very favorable to investors.

The state of affairs is such as to call for action on the part of those who wish to exchange securities in time to profit by the present high premium on Five-Twenty.

Jay Cooke & Co.

Philadelphia, Sept. 14th, 1881.

Personal.

Here is the way Richardson, of the Davenport Democrit, delineates Dr. Shallenberger, the great Fever and Ague-cure Doctor:

"Dr. A. T. Shallenberger ranks as a household word in a majority of towns throughout the Western and Southern States, but is not intimately acquainted with them as the lot of comparatively few among those who have received lasting benefit at his hands. Twenty-five miles, or thereabouts, on this side of Newark, smoke, disease, mortification, Pus, and festulosity of the dense clouds of its forge and foundry fires, away from the intense rattle of its machinery, is situated the iron works of Roosener, Pennsylvania, noted for its manufacture of Bessemer Hams, which are sold all over the world. The name of Roosener is scarcely heard of outside of its immediate vicinity, but those who have received lasting benefit at his hands, twenty-five miles, or thereabouts, on this side of Newark, smoke, disease, mortification, Pus, and festulosity of the dense clouds of its forge and foundry fires, away from the intense rattle of its machinery, is situated the iron works of Roosener, Pennsylvania, noted for its manufacture of Bessemer Hams, which are sold all over the world.
