Poetry.

A WORKMAN'S WOOING.

I know the hands you've had to reap,
The sweat that's on your brow and cheek,
But my heart is made of a good sound steel,
And though it's in the world with my mate's steel,

My coat may be poor, my words may be few,
But I'll give you a good honest love,
And though the winter winds may blow,
I'll keep you warm and true like a dove.

My coat may be poor, my words may be few,
But I'll give you a good honest love,
And though the winter winds may blow,
I'll keep you warm and true like a dove.

My coat may be poor, my words may be few,
But I'll give you a good honest love,
And though the winter winds may blow,
I'll keep you warm and true like a dove.

My coat may be poor, my words may be few,
But I'll give you a good honest love,
And though the winter winds may blow,
I'll keep you warm and true like a dove.

Miscellany.

The Pawnbrokers' Shop—Misery and Extortion.

A MAN OF TWO SIZES had occasion to
visit several pawnbrokers' establishments
in this city, to redeem some articles pawned
by a friend who had once seen better days.

A brief mention of my experience may
be instructive as well as entertaining.
The pawnbroker's shop is a place where
the poor man's misery is made a business.

I had been told of the system of un-
der-estimating the value of articles pawned,
and the exorbitant interest charged on
them. I had heard of the misery of the
poor man who is driven to pawn his
possessions.

A Few Words on Monkeys.

The true monkeys are smaller and
more numerous than the apes and
baboons. Those with the long tails and
of common appearance may be inhabitants
either of the Old World or the New.

MANUEL H. LITTLE, Editor

SATURDAY MORNING, FEB 17, 1872

OUR COUNTRY AND ENGLAND.

The daily papers have found plenty of food for editorial ability in the present state of affairs existing between England and the United States.

The Union School.

Our school is progressing finely under the new rule. At no time since its organization has this well known institution of learning been in such a thorough working order as at the present.

Professor A. R. Deal, entered upon his duties as Principal the 4th of September last assisted by Miss Alice M. Deal as Preceptor, Miss Annie Smith in the Intermediate, and Miss Kittie Clarkson in the Primary departments.

Of the other teachers, two of whom, Misses Deal and Clarkson, are graduates from the school, too much can not be said.

In the words of many we might say that the school is most properly and satisfactorily conducted, reflecting credit upon teachers and pupils and from present indications will be culminating of every desired good in the future.

From Plymouth.

For the Northville Record. The Amity Dramatic Association of Plymouth produced in the evenings Feb 6th and 7th, this beautiful and thrilling drama entitled "The Maiden Haunted."

The Illustrated CHRISTIAN WEEKLY has increased its circulation very rapidly of late, it having added since December, 1871, over 4,000 subscribers to its list.

MEETING OF THE MEDICAL SOCIETY.—The last meeting of the Wayne, Oakland and Washtenaw Union Medical Society was held at Plymouth on Thursday the 1st inst.

A general invitation is extended to physicians, and all are earnestly requested to enhance the interest and success of the society by their presence.

Arrival and Departure of Mails. ARRIVES 10:30 A. M. AND CLOSING 12:00 P. M.

New Advertisements. Farm for sale - Chas Steward.

To Printers - A Bargain.

A quarto medium Gordon Press, in perfect working order for only \$300 cash. It will print a full 1000.

DEATHS - The deaths in Novi have been frequent of late, the number within two weeks surpassing that of years past.

The Union School closed during the past week from the prevalence of measles among some of the scholars and the fear of its further spread.

THOMAS BOGART, of West Novi, paid the other day, thirty dollars for a rooster.

WASHINGTON ANNIVERSARY PARTY. - The 22d of February is to be celebrated at Plymouth by a party at Connie's Hotel.

Our Novi friend, E. S. Woodman, Esq., is the subject of a good joke just now being reported down with the small-pox.

Cold Again - After several days of warm weather, we are again compelled to don our over coats, put on gloves and tie up our ears.

WELL M. CARLTON will give exercises before the Lyceum of the United School at Milford on Thursday evening 29th.

Mr. John Amlder has now a new saw mill 54x82 in size. This building is located on the site of the old one which from its decayed condition was found unsafe.

A. O. O. H. ENTERTAINMENT - The dramatic and literary entertainment given on the evening of the 21, by the members of the A. O. O. H. Society, was well attended and the receipts fully up to the expectation of the performers.

VERY SICK - Mrs. L. A. Yerkes, who, as her many friends are aware, has suffered for many years from an occasional fit of sickness, started on a visit to the South several weeks ago.

TO OUR SUBSCRIBERS - It is very desirous with us that our subscribers should receive every number of the paper issued from the office.

FRUIT FILLED - The former pastor of the Presbyterian Church, Rev. James DeBarr, who has of late been ministering at another point in the State, has again assumed pastoral charge of the Church here.

ANOTHER FORMER CITIZEN IN TOWN - As we observed the general consensus of Mr. Edw. McFarland, Esq., at present residing at St. Johns in this State.

REBOLD UPON A SHABBY BED - A snailly form as lying; Fond children lullaby that sinking head, And whisper, "Mother's dying."

IS SHOWER - His falling rain at night, Sins out of sight have drifted, From boys' battles with truth and right, The tonic cry was lifted.

MILLIONS OF MARTYRS' SONS HAVE MADE - Their bed in smoke and ash, By stones their crosses have been stayed, By crosses, lances, lashes, Yes, from their graves, the daises bright, Their beauty the valley,

IN CLOVES OF CRIME ON CALVARY'S BREST - One Savior's sun descended; Bet in his three days' rock bound rest, Were grief and glory blended, That sun struck on the eternal rock, And bounded back to heaven,

SENSUOUS - They bear the light - Beyond the range of vision; But border-lands of blackest night, Jer touch the leads of vision, A million hearts are wrapt with mirth, Where one is bathed in sorrow;

WHEN HEARTS RESEMBLE WORLDS IN SIZE - Two parts may be benighted, One part may be enlightened, From shores that are still lighted, They, (not till then) our sun will glow In glory, as it is or, And in the sky of faith, shall know No east, no west horizon.

THE ALABAMA CLAIMS

GREAT EXCITEMENT IN LONDON.

ENGLAND REQUESTS THE WITHDRAWAL OF INDIVIDUAL CLAIMS.

Our Government Firm in her Demands.

HOW THE GERMAN AND AUSTRIAN PRESS VIEW THE MATTER.

LONDON, February 7. - The subject of the Treaty of Washington and the claims of the American Government for indirect damages against England, and gave rise to a meeting of the London Association of the Friends of the Alabama, which was held at the Hotel de Ville, on the 6th inst.

ARTHUR J. O'CONNOR, formerly Under Secretary of State for Foreign Affairs, claimed the government for all the trouble which had been wrought. He thought, however, that the American government would receive from its own people more than it could expect from the British.

NEW YORK, January 7. - The TELEGRAPH this afternoon publishes the following dispatches between Schenck and Fish.

TO THE HON. HAMILTON FISH, Secretary of State, Washington.

IN VIEW of the expression of opinion as to the action of the British Government in reference to the Treaty of Washington, I desire to be particularly advised of whether the government of the United States will in any degree acquiesce in the status of indirect claims as recently presented.

LONDON, February 7. - The excitement over the Alabama claims continues in the newspapers, but the journals which oppose them do not seem to be becoming radically altered.

THE VOICE OF AMERICA. The Vienna Note PLIE FRENCH says England seems to be on her guard at once and the same time.

MURDERERS' ATTEMPT. - S. N. Ake, a quietly disposed stranger, who entered this vicinity a short time since, was pounced upon and unmercifully beaten the other day by some unprincipled youngsters.

Mrs. Lyman Brooks who has been very ill for several weeks past, is now reported as recovering.

ADVERTISED LETTERS. List of letters remaining in the office at Northville, Feb. 1.

A FARM FOR SALE. For sale a FARM of 80 acres, 3 miles southwest from the village of Northville, good soil, under high cultivation, good fence, buildings and orchard, and well watered.

FLORAL GUIDE FOR 1872, containing 72 pages and two beautiful colored plates, nicely illustrated, given plain directions for the cultivation of nearly a thousand varieties of flowers and vegetables.

Mr. Edward Smith has disposed of his house and lot here to E. P. Kellogg for a farm at Ovid.

Unquestionably the best sustained work of the kind in the World.

Harper's Magazine.

There are few intelligent American families in which Harper's Magazine is not to be found. It is a monthly magazine, published by Harper & Brothers, New York.

SUBSCRIPTION RATES. Terms: One Year, \$3.00; Six Months, \$1.75; Three Months, \$1.00.

AN EXTRA COPY OF HARPER'S MAGAZINE FOR ONE YEAR, \$3.00. Sent by mail, postage paid.

POOR MAN'S FRIEND ALHAMBRA Dollar Store! ANYTHING FOR ONE DOLLAR. New Goods Arriving Daily. 22 Woodward Ave. Northville.

RAILROADS.

FLINT & PERE MARQUETTE R. W. HOLLY, WAYNE & MONROE DIVISION. On and after Jan. 1st, 1872, the following trains will run as follows:

GOING NORTH. City, 10:30 a.m.; Wayne, 11:30 a.m.; Monroe, 12:30 p.m.

GOING SOUTH. Flint, 10:30 a.m.; Perre Marquette, 11:30 a.m.; Detroit, 12:30 p.m.

DETROIT AND MILWAUKEE. On and after Jan. 1st, 1872, the following trains will run as follows:

GOING WEST. Detroit, 10:30 a.m.; Milwaukee, 11:30 a.m.

THE NEW NORTH WEST ROUTE. THE DETROIT, LANSING & LAKE MICHIGAN RAILROAD.

GOING WEST. Detroit, 10:30 a.m.; Lansing, 11:30 a.m.; Lake Michigan, 12:30 p.m.

FOR SALE. Type for Sale. Having recently purchased Long Primer type of reading matter in my paper, I will sell the Brevier type now in my local columns.

FOR SALE - HOUSE AND LOT. I will sell my farm (Meat Farm) of 80 acres, 4 miles west, and 1 mile north of Northville.

FOR SALE - HOUSE AND LOT. The subscriber, having taken up her residence in another place, offers her house and lot in this village for sale.

FOR SALE - HOUSE AND TWO LOTS. A small sized dwelling, with a good sized lot, also a desirable vacant lot on Cady street.

FOR SALE - HOUSE AND LOT. I will sell my dwelling and lot opposite the Argo Mill, as a bargain for a cash customer.

FOR SALE - A HOUSE AND TWO LOTS. A small sized dwelling, with a good sized lot, also a desirable vacant lot on Cady street.

V. O. WHIPPLE. DEALER IN All kinds of Light and Heavy HARNESS, CURRY-COMBS, BRUSHES, WHIPS.

Repairing. promptly attended to. (227 Threshing) for the patronage given me in the past, I would solicit a continuance of the same.

V. O. WHIPPLE. 2-12 12m.

A Reminiscence of Peter the Great.

In the fall of 1717, Peter the Great, who was just returning from France, spent four days in Berlin, residing in the Castle of Monbijou, of the Queen, Sophia Dorothea. The conqueror of Pultowa was forty-five years of age; twenty years before, in 1698, he had seen Berlin for the first time, when on his way to Sardinia as ship-captain. The whole of Berlin was a new sight to him. The half-miraculous, barbaic, stern, while making his entry on Sunday, the 10th of September 1717. Nature had impressed the stamp of severity on the brow of this man, who, not only in his capacity, but also in his appearance, was the greatest monarch of his time. Already full grown when but seventeen years of age, the symmetrical body had attained the height of seven feet one inch. Bavarian moustache, his broad, powerful shoulders were supported by a massive, well-formed head, with large flashing eyes, high forehead, and slightly bowed nose, beneath which the pointed moustache corresponded with the nose. He had a small mouth, the full underlip of which gave evidence of a great sensuality. A peculiar ornament of the noble head was the dark hair reaching to the shoulders. Thus Peter the Great was an imposing sight, who, even without the ermine, as carpenter in Sardinia, or as sailor in London, made a mighty impression. History tells that, with his extraordinary good appetite, he ate six times as much as other human beings.

On the second day of his being in Berlin, on Monday, September 20, 1717, King Frederick William I, rode with his august guest and a large retinue through the city, for the purpose of showing the Russian Emperor the glories of Berlin. They took the Newmarket in their way, where the brother stood.

"Brother, Frederick, what kind of a machine is that?" asked Peter.

"A gallows, for the hanging of thieves and deserters," answered the King.

"Indeed! Well, now, it must be a beautiful sight to see a fellow kicking and sprawling there! I am anxious to see the sight." Do procure me this pleasure at once," cried the Czar, with sparkling eyes.

The King, indignant at such a demand, and embarrassed at being obliged to deny his guest any request, answered cravily: "I regret to say that at this moment we have no candidate for the gallows, but then I will order an inquiry in the prisons for to-morrow."

The Czar wrinkled his brow, and his eye glanced over the sea of heads on all sides.

"But why, this long delay, brother? Here are enough people; let the first one that comes handy be hung for my benefit."

Hard a matter as it was for the King to be obliged to refuse his guest a favor, he yet answered with determination: "It is not the practice in this country to hang the first one that comes handy, but only such as have been properly tried and condemned by the Judge as malefactors."

"In his heart the King was wishing that the ride was over and the gallows out of sight. But the Czar was anxious to see a hanging. It must be very amusing.

"If it is so," said he, drawing his sword, "I will hang the first man I see with me. Well, let us hang one of my servants."

The King was frightened, but finally his firm will and earnest determination succeeded in getting the Czar off the gallows, and they rode on, and Peter the Great missed the enjoyment of seeing a hanging on the gallows at the Newmarket. (Continued.)

Confidant.

In the old story, William Kinsella told it to Sergeant Buckley this morning. He resides in Russell County, Canada. He arrived in this city yesterday morning from the Michigan Southern Depot. He proposed to purchase a ticket for Detroit, and a young man, very obliging, procured him a second class car. He took his seat in the car. The train whiffed Detroitward. Another well-dressed, nice young man made his appearance. The young man sat next to K., and descendingly informed him that he (the nice young man) felt better this morning, having enjoyed a good night's rest. He, too, had just come from California. He was en route to Ottawa, Canada. Uncle had died in California; sorry for the old gentleman, but he had left an immense estate. The nice young man said he had settled up the estate, and had just forwarded \$10,000 in gold to Detroit, and was taking a car load of goods to the same place. Hadn't thought he would have to pay freight on the goods until he reached Detroit, but had just learned that the car would be switched off unless the money was paid immediately. Hence take it, he hadn't the amount about him, but he did have a \$1,000 bond of the Silver Mining Company of Denver City, would Mr. Kinsella mind loaning him eight or nine hundred dollars until they should reach Detroit, taking the bond for security? Kinsella would be happy to oblige him, but he had only \$700 in gold; would that amount do? Well, yes, and the transfer was made in the closet of the car; just that people shouldn't see so much money in their possession.

Then the nice young man said he would be back shortly. —Chicago 1874.

Ducks and their Management.

Any calculation as to the return to be expected by those who keep ducks, depends entirely on the possession of a suitable locality. They are most likely to be kept with profit, when access is allowed them to an adjoining marsh, where they are able in a great measure to provide for themselves; for if wholly dependent on the breeder for their living, they have such voracious, insatiable appetites, that they would soon, to use an emphatic phrase, "eat their heads off." No description of poultry, in fact, will devour so much of food as ducks.

But certain moderate limits are necessary for their excursions, for otherwise they will gradually learn to absent themselves altogether, and acquire semi-wild habits, so that when they are required to be put up for feeding or immediate sale, they are found wanting. Ducks, too, early allowed their liberty on large pieces of water, are exposed to so many enemies, both by land and water, that few reach maturity; and even if some are thus fortunate, they are ever after indisposed to return to the discipline and regular habits of the farm or small enclosure. They are in health in small enclosures, but good management, though we fear not with profit, which is the point to which all an advanced tend.

There is no doubt that ducks may be made profitable as egg-producers, but the quality of their eggs and the extra labor required to obtain them—for unless

USEFUL AND SUGGESTIVE.

After ducks have got to be out-tough, and tasteless, put them into a tub of water, and wash them a little, and they will be as fit to use as when first from the bakery.

Instead of the Washington Life Insurance Company, for the benefit of your family. No creditor can touch the proceeds.

To Cleanse the Inside of Jars—Fill them with water and stir in a spoonful or more of pearlash; empty them in an hour, and if not perfectly clean, fill again and let them stand a few hours. For large vessels lye may be used.

An eminent French physician recently stated that the French consume more tobacco than any other nation, and he attributes the enervation of the soldier, as evinced during the late war, to the combined effect of alcohol and nicotine upon the natural character.

PREPARING CORN FOR SEED.—An Illinois correspondent of the Rural New Yorker says: "Soak doubtful seed corn in chloride of lime and it will come. If you soak seed corn in a water in which a little copper has been dissolved, the gobbers and crows will give it a wide berth."

How to Make Butter Come Easy.—I will give a recipe, according to my experience, which will obviate that difficulty. Take a pint two-thirds full of lukewarm water; add about two table-spoonfuls of salt, two quarts of more wheat shorts, give this the cow once or twice a day, and she will give you a fine butter. The difficulty will be remedied. I find in your last number's correspondent recommends an amount as coloring matter for butter. Now, I claim that the orange carrot, grated, mixed with new milk, strained and added to the cream just before churning, is far superior and gives it a much better flavor. —Cor. Rural New Yorker.

According to Dr. Harff, March and April are the most favorable months for cutting timber intended to be used by builders and carpenters, the average per cent of moisture being less than forty per cent, while in the three following months the average is forty per cent, and the three winter months, fifty per cent.

Timber from twenty to twenty-five per cent of water, and never less than about ten per cent, and if the moisture is entirely removed by artificial means, the wood loses its elasticity and flexibility, and becomes brittle. Any artificial seasoning of wood should be carried on very gradually, the temperature at the beginning being low, and the process not carried too far. —American Rural Home.

Ability to meet an emergency may be largely a natural gift, yet it is not always equal to the exigencies of the proper emergency. Many persons, in case of an accident, stress, fire, or leak of any kind, seem incapable of any useful emergency exertion. Even if the emergency is a slight and common one, they are at a loss to do the most ridiculous things. It is desirable for those who are conscious of an inability to exercise judgment in the most exigent moments, to make a list of things to do in case of an accident, and to have it all written out in a little book, which they can carry about with them, and which they can refer to in a moment of need. This is a very useful thing, and one which every person should have. It is a very simple thing to do, and one which can be done in a few minutes. It is a very useful thing, and one which every person should have. It is a very simple thing to do, and one which can be done in a few minutes.

A Varied Diet for Fowls.

There are no animals more omnivorous than fowls—fish, flesh, herbs and grains being devoured by them with equal relish. We say equal, for though they commonly gorge upon meat with greater avidity than upon any other food, it is generally because it affords a rarity, and a relish, for the sake of which an entirely animal food, will show the same gormandage for a handful of corn.

Now, those animals accustomed to a varied diet should not be confined to an unvaried one. There are, indeed, some species which are naturally limited to a few kinds of food. Thus, the cat will eat nothing but meat, and a tiger will devour nothing but the flesh of animals, as with the human race, for instance, the diet is different, the most prudent maintain the highest of diet, when confined to one article of food. No matter how good we may be of a particular dish, we lose relish for it when allowed nothing else for a number of consecutive meals, and the intense craving for variety indicates as its source something more than mere appetite. It gives evidence of real necessities of the system, which are constantly varying with the changing circumstances of weather, employment, and other causes.

The food of a variety of fowls is as different as real needs, as we have found it to be in our studies. In pursuing them in a judicious variety, selected from the three general divisions—animal food, fresh vegetables and grains—in all seasons absolutely necessary for young and old, in order to make them perfectly thrifty. True, they will not starve on hard corn and water, neither will they pay a profit so kept.

The kinds of grain allowed must be varied the week through. Corn can be given general, and unground, raw and cooked. The water for drinking should be otherwise the fowls are too hard and bulky. With wheat bran, and middlings, wheat in the kernel, barley, and buckwheat, there need no difficulty in avoiding monotony. Rye, though the poorest grain of all, may be given occasionally, and brewers' grain if convenient.

As for animal food, the choice of suitable and economical kinds depends upon locality. Near the shore use slugs and snails, and the various sorts of fish, boiled. There is a mine of wealth in the products of the sea, which must be utilized, and which are the basis of the country poultry, and can be bought for what their skins are worth, and the carcasses boiled in an arch kettle, the flesh being so tender that fork can pick it from the bones without any bruising being required. Tallow chickens' scraps are a very profitable form of animal food for poultry, and have the advantage of keeping well. Broth, waste, such as calves' and lambs' pieces, when perfectly fresh and sweet, may be boiled and run through a sausage machine, thus making a substitute for insects, and one easily swallowed by the smallest chicken. In warm weather, when fowls have their freedom, and get too many are kept at one place, they will find for themselves all the animal food they need.

This is a very useful thing, and one which every person should have. It is a very simple thing to do, and one which can be done in a few minutes.

A Varied Diet for Fowls.

There are no animals more omnivorous than fowls—fish, flesh, herbs and grains being devoured by them with equal relish. We say equal, for though they commonly gorge upon meat with greater avidity than upon any other food, it is generally because it affords a rarity, and a relish, for the sake of which an entirely animal food, will show the same gormandage for a handful of corn.

Now, those animals accustomed to a varied diet should not be confined to an unvaried one. There are, indeed, some species which are naturally limited to a few kinds of food. Thus, the cat will eat nothing but meat, and a tiger will devour nothing but the flesh of animals, as with the human race, for instance, the diet is different, the most prudent maintain the highest of diet, when confined to one article of food. No matter how good we may be of a particular dish, we lose relish for it when allowed nothing else for a number of consecutive meals, and the intense craving for variety indicates as its source something more than mere appetite. It gives evidence of real necessities of the system, which are constantly varying with the changing circumstances of weather, employment, and other causes.

The food of a variety of fowls is as different as real needs, as we have found it to be in our studies. In pursuing them in a judicious variety, selected from the three general divisions—animal food, fresh vegetables and grains—in all seasons absolutely necessary for young and old, in order to make them perfectly thrifty. True, they will not starve on hard corn and water, neither will they pay a profit so kept.

The kinds of grain allowed must be varied the week through. Corn can be given general, and unground, raw and cooked. The water for drinking should be otherwise the fowls are too hard and bulky. With wheat bran, and middlings, wheat in the kernel, barley, and buckwheat, there need no difficulty in avoiding monotony. Rye, though the poorest grain of all, may be given occasionally, and brewers' grain if convenient.

As for animal food, the choice of suitable and economical kinds depends upon locality. Near the shore use slugs and snails, and the various sorts of fish, boiled. There is a mine of wealth in the products of the sea, which must be utilized, and which are the basis of the country poultry, and can be bought for what their skins are worth, and the carcasses boiled in an arch kettle, the flesh being so tender that fork can pick it from the bones without any bruising being required. Tallow chickens' scraps are a very profitable form of animal food for poultry, and have the advantage of keeping well. Broth, waste, such as calves' and lambs' pieces, when perfectly fresh and sweet, may be boiled and run through a sausage machine, thus making a substitute for insects, and one easily swallowed by the smallest chicken. In warm weather, when fowls have their freedom, and get too many are kept at one place, they will find for themselves all the animal food they need.

Confidant.

In the old story, William Kinsella told it to Sergeant Buckley this morning. He resides in Russell County, Canada. He arrived in this city yesterday morning from the Michigan Southern Depot. He proposed to purchase a ticket for Detroit, and a young man, very obliging, procured him a second class car. He took his seat in the car. The train whiffed Detroitward. Another well-dressed, nice young man made his appearance. The young man sat next to K., and descendingly informed him that he (the nice young man) felt better this morning, having enjoyed a good night's rest. He, too, had just come from California. He was en route to Ottawa, Canada. Uncle had died in California; sorry for the old gentleman, but he had left an immense estate. The nice young man said he had settled up the estate, and had just forwarded \$10,000 in gold to Detroit, and was taking a car load of goods to the same place. Hadn't thought he would have to pay freight on the goods until he reached Detroit, but had just learned that the car would be switched off unless the money was paid immediately. Hence take it, he hadn't the amount about him, but he did have a \$1,000 bond of the Silver Mining Company of Denver City, would Mr. Kinsella mind loaning him eight or nine hundred dollars until they should reach Detroit, taking the bond for security? Kinsella would be happy to oblige him, but he had only \$700 in gold; would that amount do? Well, yes, and the transfer was made in the closet of the car; just that people shouldn't see so much money in their possession.

Then the nice young man said he would be back shortly. —Chicago 1874.

Ducks and their Management.

Any calculation as to the return to be expected by those who keep ducks, depends entirely on the possession of a suitable locality. They are most likely to be kept with profit, when access is allowed them to an adjoining marsh, where they are able in a great measure to provide for themselves; for if wholly dependent on the breeder for their living, they have such voracious, insatiable appetites, that they would soon, to use an emphatic phrase, "eat their heads off." No description of poultry, in fact, will devour so much of food as ducks.

But certain moderate limits are necessary for their excursions, for otherwise they will gradually learn to absent themselves altogether, and acquire semi-wild habits, so that when they are required to be put up for feeding or immediate sale, they are found wanting. Ducks, too, early allowed their liberty on large pieces of water, are exposed to so many enemies, both by land and water, that few reach maturity; and even if some are thus fortunate, they are ever after indisposed to return to the discipline and regular habits of the farm or small enclosure. They are in health in small enclosures, but good management, though we fear not with profit, which is the point to which all an advanced tend.

There is no doubt that ducks may be made profitable as egg-producers, but the quality of their eggs and the extra labor required to obtain them—for unless

USEFUL AND SUGGESTIVE.

After ducks have got to be out-tough, and tasteless, put them into a tub of water, and wash them a little, and they will be as fit to use as when first from the bakery.

Instead of the Washington Life Insurance Company, for the benefit of your family. No creditor can touch the proceeds.

To Cleanse the Inside of Jars—Fill them with water and stir in a spoonful or more of pearlash; empty them in an hour, and if not perfectly clean, fill again and let them stand a few hours. For large vessels lye may be used.

An eminent French physician recently stated that the French consume more tobacco than any other nation, and he attributes the enervation of the soldier, as evinced during the late war, to the combined effect of alcohol and nicotine upon the natural character.

PREPARING CORN FOR SEED.—An Illinois correspondent of the Rural New Yorker says: "Soak doubtful seed corn in chloride of lime and it will come. If you soak seed corn in a water in which a little copper has been dissolved, the gobbers and crows will give it a wide berth."

How to Make Butter Come Easy.—I will give a recipe, according to my experience, which will obviate that difficulty. Take a pint two-thirds full of lukewarm water; add about two table-spoonfuls of salt, two quarts of more wheat shorts, give this the cow once or twice a day, and she will give you a fine butter. The difficulty will be remedied. I find in your last number's correspondent recommends an amount as coloring matter for butter. Now, I claim that the orange carrot, grated, mixed with new milk, strained and added to the cream just before churning, is far superior and gives it a much better flavor. —Cor. Rural New Yorker.

According to Dr. Harff, March and April are the most favorable months for cutting timber intended to be used by builders and carpenters, the average per cent of moisture being less than forty per cent, while in the three following months the average is forty per cent, and the three winter months, fifty per cent.

Timber from twenty to twenty-five per cent of water, and never less than about ten per cent, and if the moisture is entirely removed by artificial means, the wood loses its elasticity and flexibility, and becomes brittle. Any artificial seasoning of wood should be carried on very gradually, the temperature at the beginning being low, and the process not carried too far. —American Rural Home.

Ability to meet an emergency may be largely a natural gift, yet it is not always equal to the exigencies of the proper emergency. Many persons, in case of an accident, stress, fire, or leak of any kind, seem incapable of any useful emergency exertion. Even if the emergency is a slight and common one, they are at a loss to do the most ridiculous things. It is desirable for those who are conscious of an inability to exercise judgment in the most exigent moments, to make a list of things to do in case of an accident, and to have it all written out in a little book, which they can carry about with them, and which they can refer to in a moment of need. This is a very useful thing, and one which every person should have. It is a very simple thing to do, and one which can be done in a few minutes.
