THE OTHER SIDE.

The words "no good" I said, "I cannot do it. I have tried only to give you. I look to see how to get them out. But they seem to have taken care of me. There is a picture on the other side."

A CONCEIT.

I've sometimes said to older folks, "Such as the French people, that in the front of their eyes, they have but a single eye."

MR. BEVEL'S HOBBY.

It was in a quiet old-fashioned quarter of London that old Mr. Bevel lived. He had been young Mr. Bevel in his time, when the quarter was a quiet one, and the streets, so to speak, though even then the irresistible reflux of fashion had begun to set in.

competitors in the art, he had worked the rich mine thoroughly before others became aware of its value. Little by little his treasures had accumulated. Armors, brasses, carved furniture, china of every age and style, fragments of rich stuffs, of altar linen, ancient missals and breviaries, quaint tomes in early English, ivories, creamed by time to a delicious yellow, bits of bronzes, of silver, old tapestries, thread-bare and tarnished but still splendid, lace, pictures, parchments, spoils of cottage and cathedral, and quaint Tudor mansion—there they were, crowding every crevice and corner, every cupboard and closet, till Mrs. Bevel declared that she couldn't turn round to peace, and should inevitably go crazy if one single thing more were added to the stock.

And do you notice this little extinguisher below? That was for the link-boys to put out their torches with. London was a queer old place in those days. I don't know when I've been so pleased with anything," and he rubbed his hands. "Good gracious!" sighed Mrs. Bevel, while Maud, perky asked: "What on earth are you going to do with it, pa?" "Do with it? It's a curiosity, my dear."

everything—advertising and all. You are not to have any trouble in the matter—in turning to his wife. "All is left in the hands of Leonard Ashe. He knows the full value of everything, and will see all properly done. The sale is to be advertised for two months before-hand. Ashe will attend to that."

times, papa. "I was, indeed, and I thought you were foolish" and whitened, and felt yoked with you. "How unkind we were, and all the while you were doing this for us. Oh, papa, papa, I hope that wherever you are, you know that we understand it all now, and love you, and are so sorry. Do you, papa?"

RELIGIOUS AND EDUCATIONAL. The Boston Methodist churches have an aggregate indebtedness of about \$400,000. Owing to the falling off of legacies, the receipts of the Home Missionary Society were \$10,000 less last year than the year previous, but the gifts of living contributors were \$7,000 larger.

Women in Europe.

But it is not alone the small holdings of land which impose this character of work upon women...

The Duke of Argyll father of the Marquis of Lome, is reported is about to marry again.

Miss Francis E. Willard of Chicago, has been canvassing Massachusetts in the cause of Temperance.

There have just been forwarded from Turin to Jerusalem two colossal silver candlesticks of exquisite workmanship...

John Bright's son, Mr. William Leatham Bright, who is in this country, has by his recognizances forfeited at Salford \$500 for neglecting to appear against a prisoner arrested for swindling.

The little Republic of Costa Rica has more school teachers than she has soldiers. The army consists of 127 officers and soldiers, and the Professors and teachers in the 312 schools number 482.

The Princess Beatrice, Queen Victoria's only unmarried daughter, is not yet engaged to be married. Her reported engagement to the Grand Duke of Oldenburg is pronounced to be most false news.

A lady who was one of the Duchess de Peltz's one of the leading figures of the Court of Napoleon III, but who is now the plain Madam de Mayre has just been visiting her mother-in-law at a French court for a short time.

The marriage of the season will be that of Mr. Perkins of Boston to Miss Evans, daughter of the Hon. William M. Evans, Secretary of State. The probabilities are that the wedding will take place in Washington.

A Washington letter says: "Mr. Joseph E. Johnson has taken a house in Parkside square for the coming season? His wife is considered the greatest acquisition to society that Washington has had for years."

An instrument called the strathmore graph for recording the speed of railway trains, has been invented by a German mechanic at Cassel, and works so well that the Prussian Government is about to test it upon some of the State lines.

A Russian physician, M. Malarevsky, struck by the prevalence of shortsightedness among literary men, proposes that books should be printed in white ink on black paper, and he has made experiments with fifty persons that tend to confirm his view.

Jerome Napoleon is described by a Paris correspondent as the image of the great Emperor. He has the same broad brow, black deep-set eyes, Roman mouth and chin, a complexion of yellowish pallor, and thin, silky, dark hair, straying in straight, loose locks over the broad forehead.

"Papa Wrangel," the patriarchal Field Marshal who died last year in Berlin, was the incarnation of that penurious thriftiness that has for centuries past been a leading Prussian characteristic.

Berlin.—The photograph was not even framed.

Anecdotes of Horace Greeley.

"I well remember when I first met Mr. Greeley," said Prof. Denlow, "I was just 21, and had recently been admitted to the New York Bar."

"I suppose they are a necessary evil," I suggested, deprecatingly.

"Just the contrary! Just the contrary!" he squeaked, in his odd falsetto; "they cause disorder and they are the chief obstacles to good government."

"Don't want 'em collected! don't want 'em collected!" he squeaked; "if I let 'em have his property without payment, I don't see why C. D. E. F. and all the rest of the alphabet should be called on to serve as a police to get it back!"

"It seemed impossible to talk with a man with such eccentric notions."

Two-thirds of England is owned by 10,000 persons, two-thirds of Scotland by 220 persons, and two-thirds of Ireland by 1,942 persons.

A western man recently wrote to one of his creditors: "I know Iowa debt. Utah care and Nebraska second time for it. I Kansas back and make as Illinois as you can."

Voog-wheel, said to be the largest ever made in Patterson, N. J., has lately been finished. It is of iron, 29 feet in diameter, the periphery 10 inches wide, and it weighs 12 tons.

There is a difference in milk made, the milk made in the country is the best.

Many of the students of the Chinese mission at Hartford are entering the college and polytechnic schools of New-England and the Middle States this Autumn.

Andrassy met Bismarck at the railway station at Vienna on Monday and accompanied him to his hotel.

VARIETY AND HUMOR.

There is only one thing that is more terrible than to say a mean thing, and that is to do one.

The reason why soap suds are not washed away original sin is that there is too much lye in it.

A new pair of pants may confer respect on a fool, but when his coat is open, the fool shumps out.

Starch is said to be explosive. If caught in the family when the old man finds it has been left out of his collar.

In times of general health a doctor leads a peaceful life, but as soon as sickness comes somebody is bound to go for him.

A factious old lady, describing the rambling sermons of her minister, said: "If the text had the small-pox, his sermon would never catch it."

When you can say of a man that his religion has got hold of his pocket-book you may be reasonably sure that his religion is of the right kind.

Patrimony may be defined as something which everybody is glad to get. There is only one thing which has greater charms, and that is matrimony.

A Massachusetts lady is reported to have scolded her little boy for taking a drink of water at a hotel.

At a funeral service in Swanton last week, the minister, in his remarks, was dwelling upon the loss to the husband of the deceased, when that worthy spoke up: "Never mind me. Just throw your hat on the corpse."

A Toronto magistrate has ruled that shaving is a work of necessity, and consequently lawful on the Sabbath day, and some of the barbers of the city, who object to keeping open shop on that day, have determined to appeal against his decision.

At a recent liquor trial in Winnetka, Conn., an Irish dealer broke out as follows: "Judge, there's no use of your trying to stop liquor selling. Just as long as there is eight cents profit on a ten cent drink, rum will be sold, and no one can stop it."

Governor Fenner, of Rhode Island, absolving himself from church on fast day, was told by Dr. Wasland that he did not obey his own proclamation.

Teacher, to boy who has to be corrected frequently: "Can you tell me where the blue ridge is?"

To tell the truth, we are surprised that the women folk show the amount of common sense they do. Young men, supposing you were told, say twenty times a day, low light, your eyes are what magnifies the stars, are you, low enlightening your eyes is, low light, was that, low light, are you, low light, think you, before you would develop into the next kind of a jackass—always provided you were not one at the start.

It occurred to one of two boys in the West, who had quarreled, that a reference to his adversary's life would prove telling, and he laid it off accordingly.

Dr. L. is cautiously treating a sick man, concerning the nature of whose disease he is quite in the dark.

An officer of a Philadelphia steamship company relates the following story: "I was on a ship once going to Rio, when they dragged out a stowaway and put him to work. One day he came to me, and being a man of fine address and education, had no difficulty in convincing me that he was escaping from a German literary institution, where he had witnessed as second a fatal duel. He said he had money, and showed me several hundred pounds in notes of the Bank of England. He was willing to be considered a stowaway in order that his name should not appear in the cabin list. Could I help him to get out of the ship at Rio? I readily promised, and gave him for \$500 in Bank of England notes Mexican dollars and doubloons. He got out of the ship all right at Rio, and I carried my notes back to England, where I found, on attempting to deposit them in a bank, that they were base counterfeits, and that my intellectual stowaway was an escaped burglar and forger, and that I had become his victim."

A Chinese boy belonging to one of the Mission schools at Peking, China, at a recent examination, repeated the entire New Testament without missing a single word or making a single mistake. He is now committing to memory Dr. Martin's "Evidences of Christianity."

AGRICULTURAL AND DOMESTIC.

To remove rust from steel the steel should be washed with a solution composed of one-half ounce cyanide of potassium in two ounces of water, then brush with the following recipe: Cyanide of potassium, one-half ounce; castile soap, one ounce; whiting and water sufficient to form a paste. Cyanide of potassium is a most violent poison, and persons using it, should be particularly careful.

As soon as potatoes are dug store them in some barn or outhouse until just before freezing weather, when they must be removed to a dry and sufficiently warm cellar. A building situated like a corn crib is best for potatoes until frost comes, as they require to be placed where there is a full circulation of air. After their removal to the cellar place them in bins made of slats, holding from five to ten bushels each.

We venture the assertion that the man who takes sufficient care of his stock from their infancy till ready for the market, providing for their proper and necessary feed and shelter in the varying seasons to keep them always growing, healthy and thrifty, will find his profits to be twenty-five to fifty per cent greater than those of his neighbor on similar stock which receives the ordinary care given by the average farmer.

A husband complained that his shirt bosoms and collars were badly done up, and the case was referred to a knowing shirt-maker, and his answer is well worth the attention of housekeepers: "Yes," said the man, "the fault is with your laundress. While doing up your collars she stretches them the wrong way. Damp linen is very pliable, and a good pull will alter a fourteen-inch to a fifteen collar in the twinkling of an eye. She ought to stretch them crosswise and not lengthwise. Then in straightening out your shirt bosom she makes another mistake of the same sort. They also ought to be pulled crosswise instead of lengthwise, particularly in the neighborhood of the neck. A lengthwise pull draws the front of the neckband somewhat directly under your chin, where it was never meant to go, and of course that spoils the set of your collar. With the front of your neckband stretched too high, and your collar an inch too long, you have a most undesirable combination."

Melons may be fattened in the following manner: Before the melon has attained its full size, and while in a growing condition, insert one end of a strip of fine cotton cloth, about half an inch wide and three or four inches long, into the stem of the watermelon, by splitting the stem with a sharp pen-knife, and place the other end of the strip in the neck of a wine bottle filled with water, inclining the bottle so that the water may be absorbed by the strip, which acts as a siphon, and making the end of the outside of the bottle a little lower than that which is within the bottle. Within twenty-four hours the bottle should be refilled, as the water will all have been imbibed by the melon, and in a week or ten days it will have attained its full size. Then withhold the water to give it a chance to ripen, otherwise it will be quite insipid and unfit to eat.

It is a good plan to have a patch that is infested with thistles have given them a dose of tartar emetic by putting eight or ten grains of it into the water and soiling it by leaving it before putting it into the bottle, but let the water cool down until it is milk warm before inserting the cloth.

The Influence of the Fall-Season Upon the Health of Live-Stock.

Fall weather is more or less changeable, and in many respects, some, but similar to that of spring. The temperature especially changes, and is much lower than in summer, the nights are getting cold, and the humidity of the atmosphere increases. With the exception of a certain part of fall—the so-called Indian summer—the weather, as a rule, is rough and changeable, and storms are frequent. The vegetation, but especially the food-plants and grasses of field and pasture, which have become dry and leafless during the summer, will partially recover and become juicy and nutritious, again to a certain extent at least, if the weather is mild and favorable, but will wither still more and be made destitute of nutritious elements if night-frosts make their appearance early in the season, as is very often the case. As to the animals themselves, a change, too, is taking place—at least in so far as the functions of the skin are concerned. The activity, or rather productivity, of the latter increases, because the coat of hair grows denser and longer; the animals obtain their winter dress.

The influence of the fall, or of the conditions brought about by the fall season, is in many respects a whole some one. In the first place, the lower temperature retards more or less all processes of decomposition, and is also less favorable to the development and propagation of all lower forms of organic life than the comparatively high temperature of the summer. As a consequence, domesticated animals are less tormented by insects; and all those, usually very dangerous, infectious and epizootic diseases which owe their existence to, or which are caused by, those minute organic bodies—micrococci, bacilli, etc.—classified in modern times as prokista, become less frequent, and almost entirely cease to spread as soon as it commences to freeze, because frost interferes with the development and propagation of those disease-germs. Hence, if the weather is mild and steady, the fall season of the year is rather conducive to good health than otherwise. If, however, the weather becomes inclement, stormy and changeable, catarrhal and rheumatic diseases become frequent, the same as in the spring, and are then, as a rule, more serious than in the latter season, because in the spring the temperature rises, and weather and food improve almost from day to day, and the cold nights are getting shorter and the days longer; while in the fall just the reverse is taking place. Further, the grass and herbage of field and pasture are frequently very poor, and

almost destitute of soluble and nutritious substances; the animals, in consequence, have to suffer for want of suitable and sufficiently nutritious food, and are, therefore, often in a poor and emaciated condition when real cold weather sets in; or at a time when a good condition as to flesh is of the utmost importance. Such is the case especially, if the summer has been hot and dry, and if the weather becomes early in the fall to become changeable, cold and stormy. If both summer and fall are wet, and therefore favorable to the development of entozoa (worm) brood, worm-diseases—some of them very dangerous—will be frequent, particularly in young animals and in sheep, and in such countries as are naturally low and wet, or abounding in sloughs and swamps. On the whole, a bad fall is worse, as far as domesticated animals are concerned, than a bad spring, because the latter is followed by warmer weather and a season of plenty, and the former by cold weather and a season in which field and pasture are destitute, or almost destitute, of any food whatever.

Still, most of the calamities brought about by a bad fall can be counteracted by judicious treatment. In the first place, every owner of live-stock in our latitude at least, must take care to have his animals in good condition as to flesh when winter, or the cold season of the year, is approaching. If the food offered by field and pasture is poor, unwholesome or insufficient, it is advisable, nay, even necessary, to feed some dry food, such as hay, or straw, or some other food, every morning, especially if the weather, at the same time, has become cold, inclement, and stormy. Bad and cold weather affects an animal comparatively little if the latter has its stomach well filled with good and nutritious food, because in that case the animal organism is provided with material for producing animal heat without being obliged to consume its own tissues. On the other hand, the effect of cold and inclement weather is a very injurious one, productive of disease and emaciation, if the animal is in a poor condition, or has an empty stomach, because in that case the organism, in order to maintain the necessary degree of heat, has to consume its own tissues. It is always economical to feed well in the fall, and to give every head of live-stock sufficient shelter and protection in a stable, or a shed, etc., at least at night-time, as soon as the weather becomes cold and stormy. One bushel of grain fed in the fall is often more valuable than ten bushels fed in the winter.

Farmers' Daughters.

I was talking to a farmer's daughter the other day, and naturally, it came dropped into conversation, and we each recalled the fact that she was discontented. I asked her what she intended to do for a living, and she answered: "Oh, I don't know, I want to get away, and make money somehow. If I could go to school a little more I could teach; but they can't spare me."

I knew that all her life had been one round of cooking, and mending, and churning, and washing, and scrubbing, and ironing. I knew that her father was a wealthy farmer, a granter, and a leading church member. He has a good farm and a cosy barn—such a cosy barn—and money in bank. And when I looked at the ugly old farm house, with its black doors and small windows, its calves, and pigs, and chickens running in undisturbed tranquility over the yard, I did not wonder that she found it unattractive, and that she wanted to "get away."

I, for one, do not blame the farmer's daughter for being dissatisfied. I know how much they have to make their way. When will these learn that the life is more than meat, and the body than raiment? When will they cease considering it a waste of time to send their children to school, or a waste of money to pay for books and magazines? Why will they spend their money giving the heathen a chance to be lost, when their daughters are actually suffering for something to read? They toil and sweat, wasting the soul's best energies in providing for the poor frail body that, were it not that it is the temple of the soul, would be worth no more to us than a piece of wood or a stone. They reverse the positions, and make the rightful master servant. Their minds wholly occupied in providing for temporal wants.

Holland tells us that farmers are afraid to be educated or refined, or cultivate the beauties of nature, lest they be thought "stuck up." He says that their finer nature, being neglected, becomes sluggish and dormant. When they go to sleep, they merely go "to roost," when they eat, they "take away grub," and they "surprise their backs with clean shirts," and when they marry they "hit on." In all this we recognize more of truth than poetry. Perhaps it is true the world is what we make it; but the sad part of the truth is, that some of us can't make it what it ought to be, or what we wish it to be. If the natures that are given us with the existence that is thrust upon us are sluggish and solid, we must suffer the consequences throughout time and eternity.

No matter what we may do to eradicate the baser part, we can never attain the higher standard we might have reached if loving and considerate parents had helped to prepare the way for us. We hear a great deal said about the dignity and nobility of labor; we see the truth of this in the results of the lives of such men as Hugh Miller, Agassiz, and our old time patriots; but labor having no good end in view; labor that is merely muscular expansion and contraction for the sake of making and keeping money, is only a method of soul murder. We need never be afraid of labor, provided we work with the right spirit. Anna Dickinson used to clean street crossings to earn money to pay for books.

The law can never make a man honest. It can only make him very uncomfortable when he is dishonest.

Commercial Education. President Hayes, who regards Chicago as the real headquarters of the commerce of the nation, has, by recent communication with Mr. E. B. Bryant, the founder and father of the American system of commercial education, in regard to a course of schooling for his younger boys. They will probably take a regular course at the Chicago Business College and English language school. Information in regard to this thorough instruction can be had by addressing Mr. E. B. Bryant, 77, 79 and 81 State Street, Chicago.

That Quinine will cure Chills and Fevers is well known. But it is strange that the other febrile symptoms connected with the malarial parasite, such as Quinine, and do not produce any annoying local symptoms like burning in the ears. This fact is proved by Dr. E. Wilson's Anti-Periodic of Fever and Ague Tonic, which is a preparation of Peruvian bark without Quinine, according to the declaration of its proprietors, Wholesale, Finley & Co. of New Orleans.

Grocers everywhere sell National Tonic. If you have never used it, buy a package and be convinced of its superiority over all others.
