NHS Grad Attends Seminar on UN

Freida Bidwell of Farmington, a student in Michigan State Normal College in Ypsilanti, was among a group of 30 college students who attended a Christian Students Seminar on the United Nations here March 2-3.

Freida is a graduate of Northville High School with the class of 1945. Here at the United States headquarters of the United Nations the students saw and heard delegates of the 57 member nations in action and met many important UN officials. They visited a session of the Security Council only a few hours before the Council voted to accept Israel's application for membership and heard delegates of China, Egypt and Russia express their nation's position regarding this important matter in world affairs.

The students also visited sessions of the Economic and Social Council and heard reports on the work of the United Nations International Children's Emergency Fund, the Human Rights Section, the Trusteeship Council and the United States Mission to the United Nations. Freida was a representative of the Christian Students Seminar.

Freida was accompanied by her father, Mr. and Mrs. J. H. Bidwell, and her brother, Mr. J. H. Bidwell, Jr. They were in Northville on their way to the seminar.

Show New Plymouth Cars March 18

The new line of Plymouth automobiles, with outstanding mechanical improvements and up-to-the-minute styling, make their appearance in dealer showrooms here and throughout the United States Friday.

Completely redesigned and streamlined, the new Plymouth contains a 97-horsepower engine which is smoother, livelier, and more economical. Other changes make notable contributions to beauty, safety, and passenger comfort.

Wheelbase has been increased for a better ride and more road stability but at the same time the over-all length has been reduced for ease of handling. Although lower and narrower, the new bodies provide greater interior room for passengers. The car's appearance reflects a complete change from last year's models. The Plymouths may be seen at Ackerman Motor Sales, West Main Street, and G. E. Miller Sales and Service, Hutton Street.

The students also visited sessions of the Economic and Social Council and heard reports on the work of the United Nations International Children's Emergency Fund, the Human Rights Section, the Trusteeship Council and the United States Mission to the United Nations. Freida was a representative of the Christian Students Seminar.

Esteron 44 Results In Wild Onion Curbs

Wild Garlic also Found Vulnerable to Solution

Wild garlic and wild onion-long have been two of the most troublesome weeds in southern lawns, pastures and certified-grass seed grain seed production fields.

As lawn weeds, these plants give the lawn an uneven, ragged appearance and produce a very disagreeable odor when mowed. In pastures, dairy cattle feeding on these plants produce milk with an off flavor which is of great concern to dairymen in several states. Seed production has been limited by the presence of wild onions in many fields because of potential contamination.

During the past three years many experiments have been made with various forms of 2, 4-D to control wild garlic and wild onion. Tests with sodium salt of 2, 4-D were successful. Esteron 44, an amine liquid salt formation, however, gave good control when used at the rate of three to four pounds of 2, 4-D acid equivalent per acre. Apparently the amount of water used makes little difference in the results obtained. As many as 125 gallons per acre and a few as five gallons per acre were applied with equal success.

For pasture work, observers agree that Esteron 44 may be somewhat more effective than the amine salts, but because of the possible danger from volatility of the ester of 2, 4-D, it is suggested that the amine liquid salt be used where susceptible plants grow in immediately adjacent areas. (Lawns, for example, with adjacent flowers and shrubs.)

Superphosphate Held Best For Sugar Beet Fertility

Ordinary superphosphate is the best source of phosphate when used as a fertilizer for sugar beets, when 4 and barley, according to Dr. Sterling R. Olson, USDA soil scientist and Robert Gardner, agronomist at the Colorado A&M college experiment station.

Experiments on various fertilizers containing radioactive phosphorus, indicate that calcium metaphosphate was a close second.

Easter Seals

(Continued from Front Page)
 throughout the state. This disease alone kills five times more children each year than does infantile paralysis, measles, whooping cough, diphtheria and meningitis combined. It will assure the maintenance of the Society's state-wide program of Occupational Therapy and craft service to the severely handicapped. The program is being carried on at the present time, and which for many of them have remunerative value. It will also make possible the continuance of the Society's highly specialized services for the cerebral palsied who, rank high in the most severe crippling conditions. These children were not being properly considered until the Society initiated its clinical and treatment program. During the past year, nine cerebral palsied children were conducted by its nationally known consultant, and as a result, over 300 are under treatment.

The very generous people of Michigan who have so ably supported the cause in the past are urged this year to give their full measure of help through their generous purchase of Easter Seals. SHARE YOUR EASTER JOY.
